Table of Contents

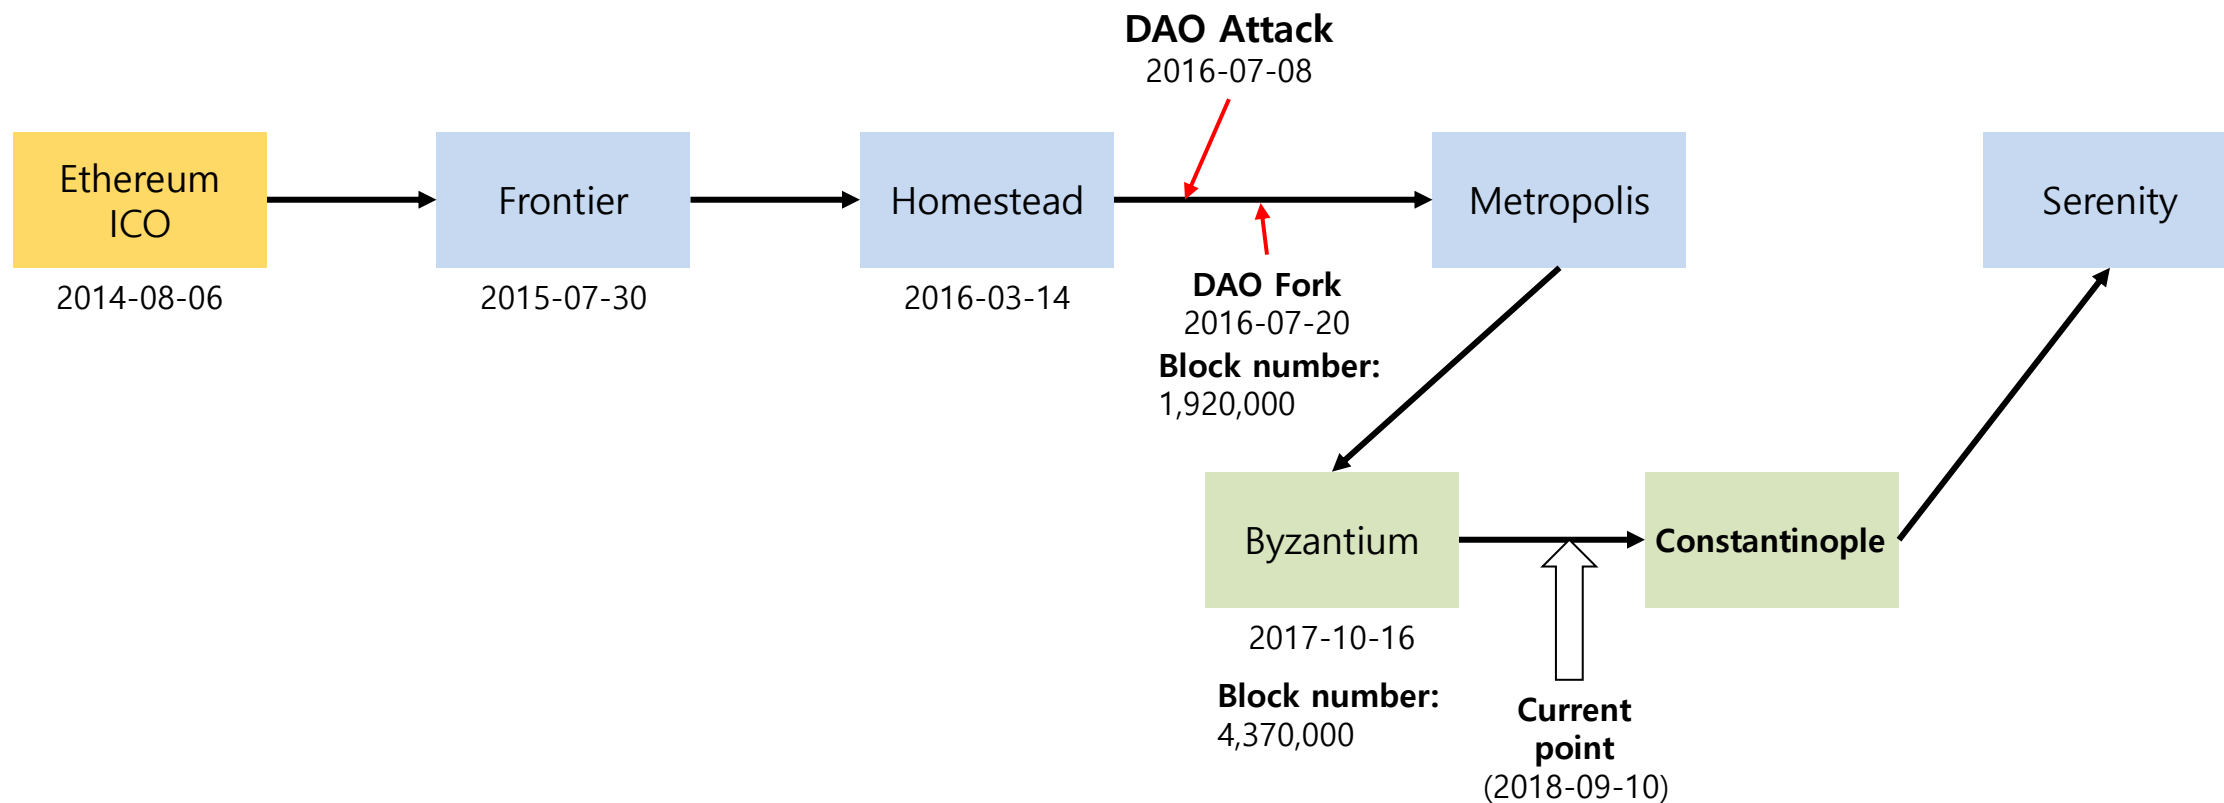

- **Ethereum Overview**
- Ethereum – Data Layer
- Ethereum – Consensus Layer
- Ethereum – Execution Layer
- Ethereum – Common Layer
- Ethereum – Application Layer

Ethereum Overview

<https://www.ethereum.org/>

■ Ethereum Roadmap

■ Main Differences between Bitcoin and Ethereum

• Smart Contracts

- Bitcoin: focus on crypto(digital)-currency service as a money transfer platform
- Ethereum: focus on a computing platform for supporting **various industry applications**

• Turing-Completeness

- Bitcoin: Use a script language (Turing-Incompleteness) to validate transaction and purposely remove loop statement
- Ethereum: Use Turing-Complete languages such as **Solidity** which supports condition and loop statement

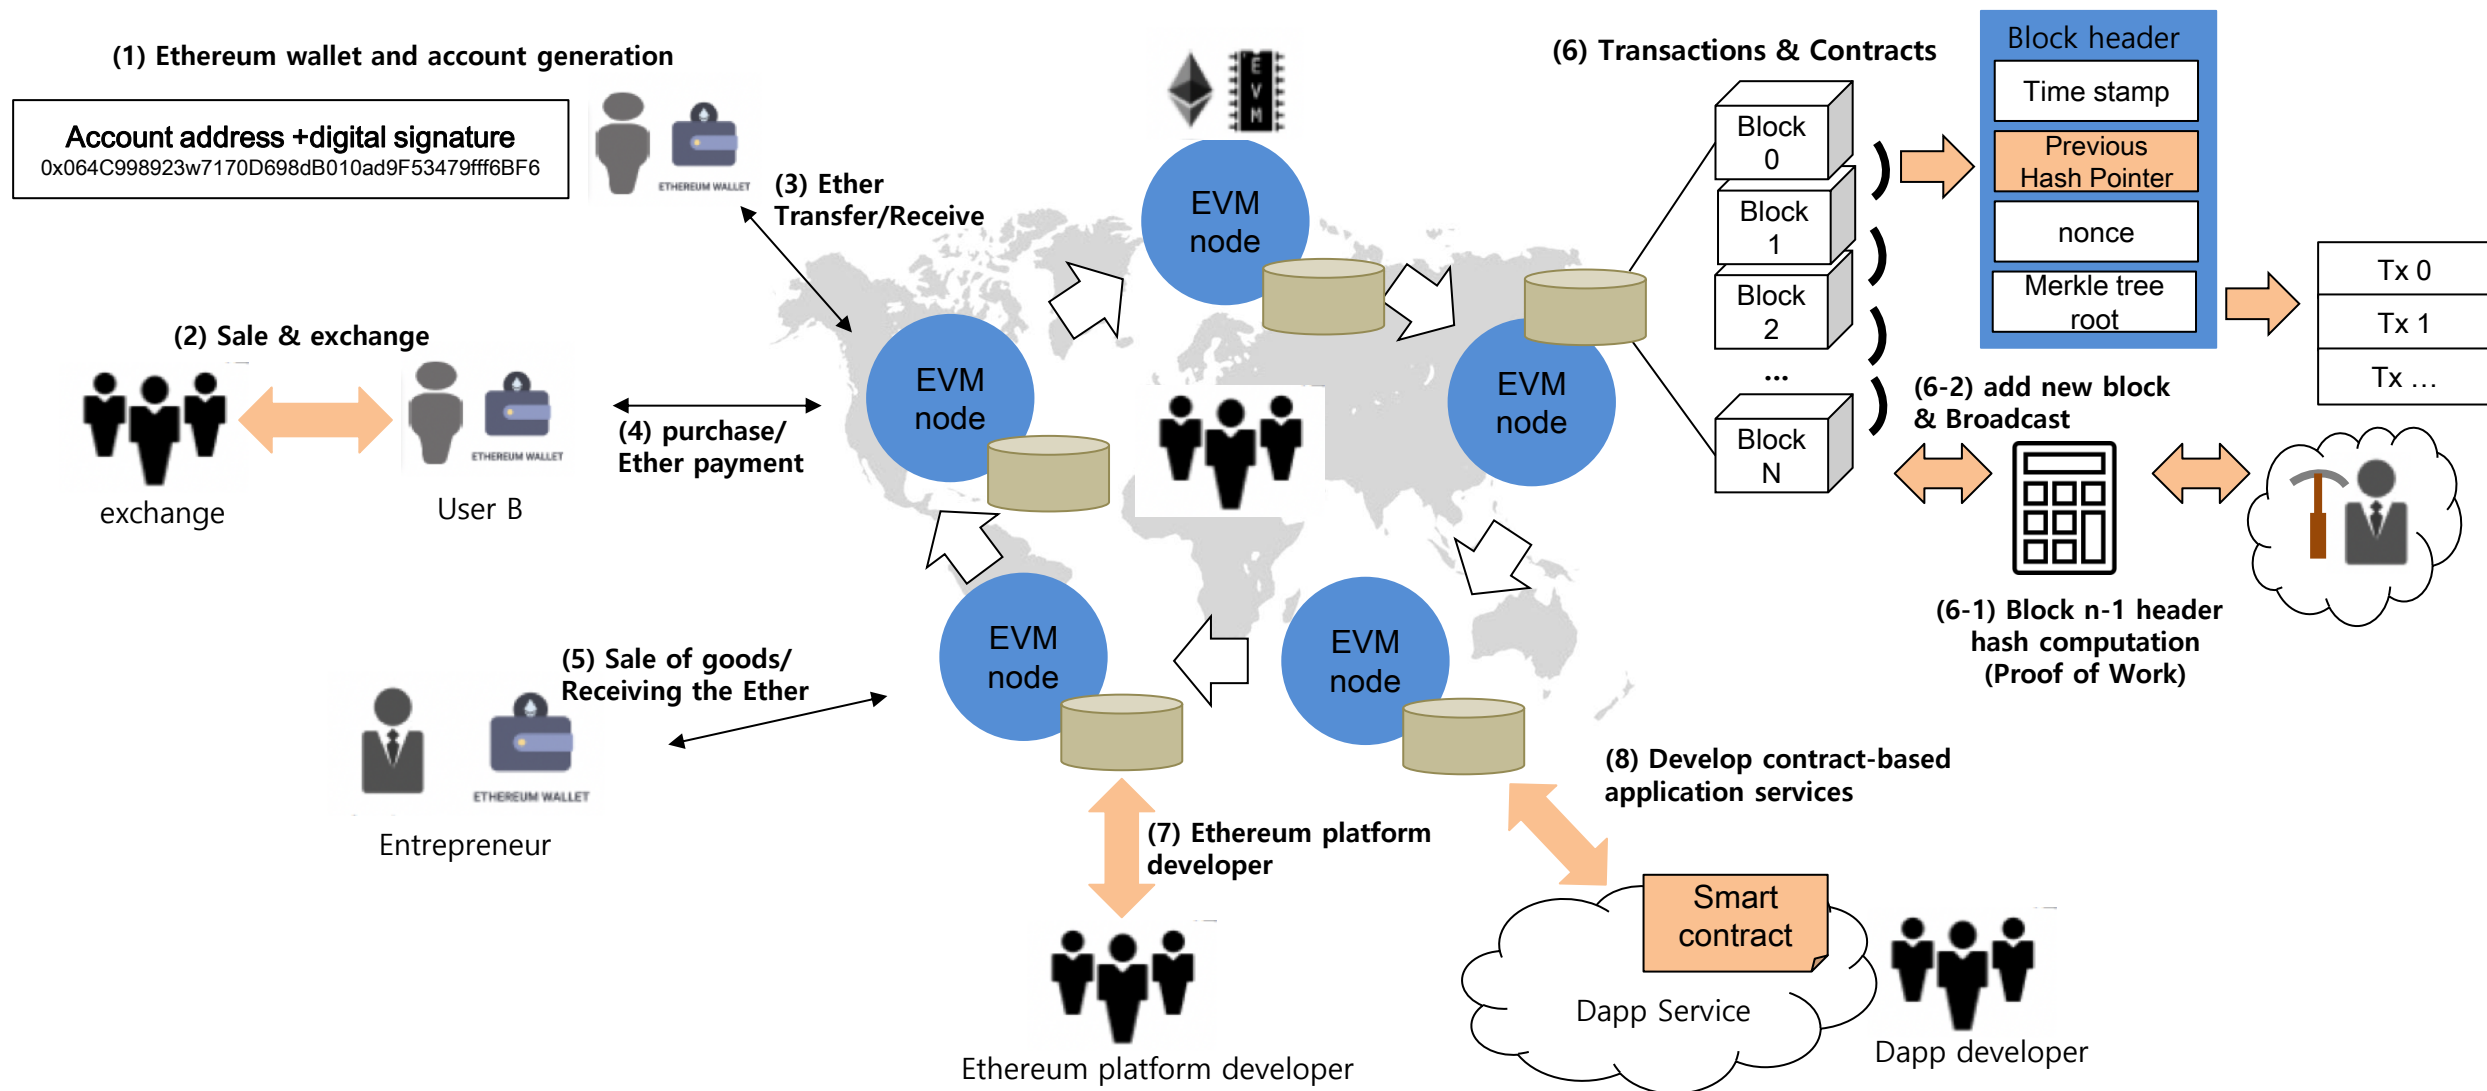

• Account-based Model

- Bitcoin: Not support the account (UTXO-based Model)
- Ethereum: Support the **account** concept

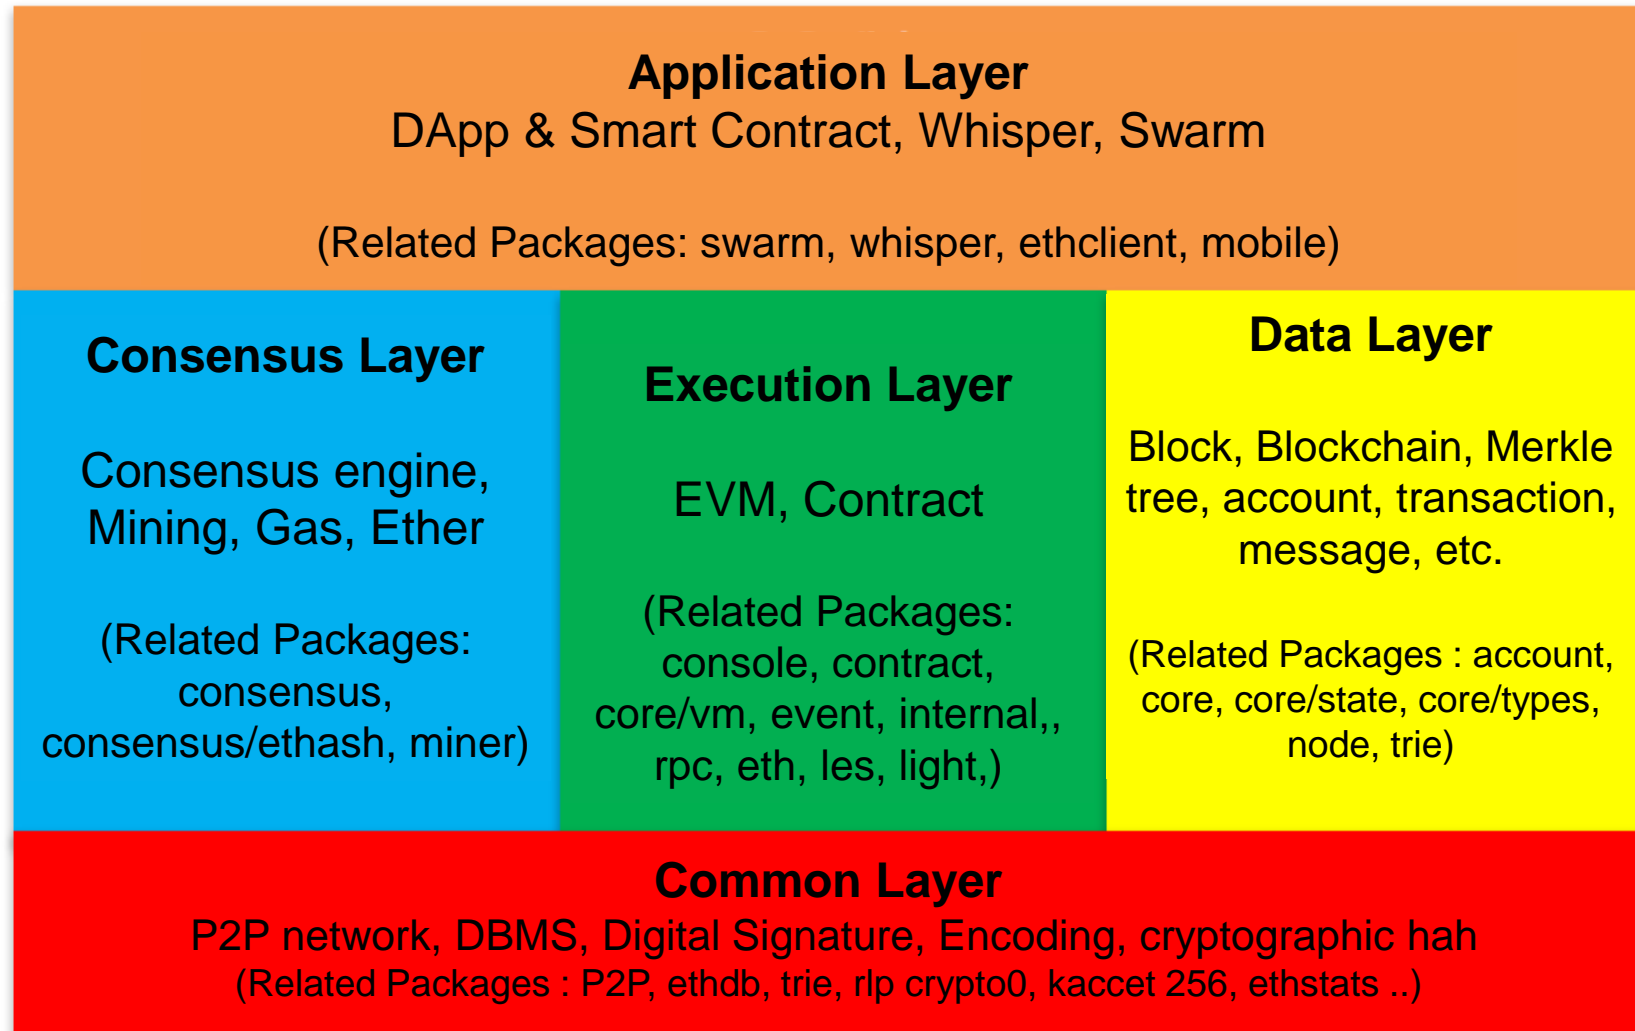

■ Comparison between Bitcoin and Ethereum

	Bitcoin	Ethereum
Block Generation Period	About 10 minutes	About 15 seconds
Transaction processing capacity	7 TPS	15 TPS
The number of nodes (08/24/2018)	9723 (https://bitnodes.earn.com/)	17519 (https://www.ethernodes.org/network/1)
Consensus	PoW	PoW (Later, PoS)
Genesis Block	01/03/2009	07/30/2015
Maximum Mint	Year 2150 → 21,000,000	Year 2128 → 100,000,000
Block Reward	12.5 BTC	3 ETH
Scope of Application	Cryptocurrency	All industry areas (including cryptocurrency)

Overall Operation Procedure of Ethereum

■ Ethereum Platform Reference Model (Based on Go-Ethereum)
